

Ref. 9567 VISION 5 MONITOR REPLACEMENT SET

DESCRIPTION

Material needed to replace a VISION 5 Monitor by a VDS LOFT monitor ref. 3311.

Kit Elements: Connector of VISION 5 LOFT monitor, including the metal base for the connection module.

Important Note: This kit does not include the monitor.

VISION 5 System: Simplified installation video (only B/W) door entry system that does not use house call wires. The call is made by transmission of a digital call code generated by the VDS amplifier.

The technology "differential video" employed allows to transmit the video signal with the highest quality without coaxial cable. The equipment related with the video signal should be VISION 5 for these installations without coax cable.

Communication is private.

In new works, lets you manage up to 199 homes, 2 entrance accesses and a central guard unit.

Maximum distance from first access to last home: 200 m.

In replacement works, the change from analogue entry to video entry system can be done taking advantage of the existing wiring.

The system capacity is 40 apartments (1 monitor per apartment) and up to 50 meters or 8 floors in the block. The monitor of the apartment needs a battery that supplies the necessary power.
